Instructions

*Elastopatch 300* is a resin modified cementitious leveling compound, designed to create auxiliary slope over roofs to divert water flow toward drains, scuppers, or outside edge. The product combines a proprietary blend of cement, aggregates, and liquid emulsions to achieve a workable, easy to use leveling material.

*Elastopatch 300* can be installed in a single application, providing a quick and easy way to fill low spots in flat roofs and achieve positive slope to aid in proper drainage. It is excellent for new construction as well as retrofit work, minimizing the removal or addition of other draining/leveling constructs.
